EDUCATION

University of Delaware

College of Engineering

Bachelor of Science in Computer Science

Major: Computer Science

Minors: Game Studies, Interactive Media

GPA: 3.89

Dean's List

Newark, DE

May 2026

Fall 22' - Fall 25'

Skills

- Programming Languages: Java, Kotlin, Python, C, C++, HTML, CSS, TypeScript, JavaScript
- Frameworks/Libraries: React, NextJs, Tanstack Start, NestJs, Express, Prisma, Jetpack Compose
- Software Proficiency: Git, Github, Figma, Supabase, Cloudflare, Vercel, Render

Relevant Courses

- CISC375: Software Engineering & Devops, CISC482: Human Computer Interaction, CISC474: Advanced Web Technologies, CISC 437: Database Systems, CISC476: Secure Software Design

Projects

DyslexEase

- Won second place for **Best Accessibility Hack for HenHacks** (University of Delaware Hackathon)
- Competed against 300 Students in a team of 2 and created a React site to help Dyslexic students and professors in academics by altering text files to be more readable. Aimed at improving accessibility for individuals with dyslexia
- Features include changing line spacing, text spacing, background color, text color, capitalizing first or last letters
- Continued development post-hackathon by adding a NestJs backend, authentication, preferences persistence, and a redesigned UI
- **Henhacks Version:** <https://github.com/TheLuckyman30/Henhacks-2024>
- **New Version:** <https://github.com/selinAbacaz/CapstoneDyslexease>

My-PL

- Developed a Premier League simulator using React and TypeScript
- Implemented algorithms for match simulation, match scheduling, and league table ranking
- Designed responsive UI components using Material-UI and CSS Grid for clear display of standings and fixtures
- <https://github.com/TheLuckyman30/My-PL>

Career Chef

- Collaborated in developing a web application where users take a quiz to receive personalized career recommendations
- Integrated GPT-4 to analyze answers and generate detailed career reports
- Designed a user-friendly interface using HTML, CSS, and Material-UI
- Implemented a chatbot feature allowing users to ask ChatGPT about their career reports
- https://github.com/selinAbacaz/starter_helpi

Goldfish Brain

- Collaborated in developing a web application for task management designed to help users organize and select tasks
- Built a full stack web application using NestJs for the backend and Tanstack Start for the frontend
- Integrated a fun minigame that helps people choose what task to work on and help overcome decision fatigue
- <https://github.com/UD-CISC474-F25/f25-cisc474-red>
